

Instructions for Authors

The *Journal of ExtraCorporeal Technology (JECT)* is the official journal of the American Society of ExtraCorporeal Technology. JECT is sent to the AmSECT members and is indexed in Medline through PubMed, PubMed Central (6 month delay), and the Cumulative Index of Nursing and Allied Health Literature (CINAHL). JECT contains original papers on topics pertaining to extracorporeal circulation and cardiovascular surgery. Case reports, techniques and applications, and review articles are also accepted for publication. Letters to the Editor and Book Reviews are encouraged. Statements and opinions are those of the author(s) and do not necessarily reflect the opinions of AmSECT, the editors or the publisher. If a manuscript is accepted for publication, all authors must agree upon certain conditions. These conditions include statements regarding conflict of interest, scientific responsibility, exclusive publication, and assignment of copyright.

JECT uses “Editorial Manager” to manage the manuscript review process. All submissions to *JECT* must be done online through the Editorial Manager portal at <https://www.editorialmanager.com/jectjournal/default.aspx>. New authors must register by following the instructions under the “**Register**” tab on the Editorial Manager link above. Authors are also encouraged to review the Authors Tutorial on the website. This tutorial will help navigate the Editorial Manager process for submission of the manuscript online.

Address inquiries to:

Managing Editor, *JECT*
AmSECT Headquarters
330 N. Wabash Ave., Suite 2000
Chicago, IL 60611
Tel: 312-321-5156
Fax: (312) 673-6656
ject@amsect.org

FORMS

Completed Copyright and Conflict of Interest forms are required with the submission of a manuscript to Editorial Manager (www.editorialmanager.com/jectjournal). The forms are available on the EditorialManager site. Authors must print out the forms and have ALL authors sign the forms. The completed forms must be scanned for transmission to Editorial Manager along with the manuscript. For multi-institutional collaborators, separate forms can be signed, scanned and submitted. The manuscript will not be processed into the Editorial Manager system until all forms are received.

All copyright information will be maintained at the *JECT* editorial offices. No part of the published material

may be reproduced elsewhere without written permission from the *JECT* Editor and publisher. Material accepted for publication in *JECT* becomes the property of AmSECT.

To comply with the Copyright Act of 1976, ALL authors must sign a copyright permission form. Manuscripts will not be processed until signatures from all authors are received.

Copyright Permission Form: www.editorialmanager.com/jectjournal/account/copyrightform.DOC

JECT requires authors to disclose any commercial associations that might pose a conflict of interest with the submitted manuscript by including a completed Conflict of Interest form with the submitted manuscript. It is the responsibility of the authors to fully disclose institutional or corporate affiliations that might constitute a conflict. Any association that results in financial exchange between the author(s) and a private corporation, or entity, must be disclosed. These include consultancies, employment (current or past), stock ownership, patent-licensing or similar relationships, and if commercial products are evaluated in the study.

If no conflict of interests exists with any of the authors on the manuscript “NONE” is indicated on the Conflict of Interest form. If there is a conflict, only authors with a conflict need to sign the Conflict of Interest form. A submitted manuscript without a completed Conflict of Interest form will not be processed and returned to the author with an explanation.

Conflict of Interest Form: www.editorialmanager.com/jectjournal/account/conflictinterest.DOC

All funding sources supporting the work are to be acknowledged at the end of the manuscript. If the editorial staff feels that a potential conflict of interest exists, it may be disclosed in written format. Authors will be apprised of such a decision in writing prior to publication.

Authors wishing to remove a submitted manuscript from consideration after it has been submitted must do so by submitting a written request to the Journal Editor. In the event of a withdrawal, the manuscript will be destroyed to ensure confidentiality for the authors.

TYPES OF PAPERS

Original Article

Original Article papers are those that represent original research in the field of cardiovascular medicine and/or perfusion. These may be either clinical or laboratory studies.

Case Reports

Case reports describe a unique aspect of a clinical case or series of cases that have not been previously reported. These are generally brief in length and should contain the

following sections: Overview, Description, Comment, References (limit to less than 20).

Techniques and Applications

Techniques or application papers are descriptions of developing technologies that may or may not have been applied in a laboratory or clinical setting. These are generally short papers and should contain the following sections: Overview, Description, Discussion, References (limit to less than 20).

Review Articles

Review articles generally are written as exhaustive summations of the current knowledge in a subject area. These are generally long papers and contain the following sections: Introduction, Multiple Sections with Subheadings, Summary, References (no limit).

Letter to the Editor

Letter to the Editor abstracts should be short, unstructured single paragraphs, no longer than 150 words, emphasizing key findings in the article, and raising major points; 2) the abstract should not contain abbreviations or references; and 3) the total length of letters to the editor should be between 300 and 1,000 words and can include figures and tables. References (limit to less than 20).

Common Uses for the Letter to the Editor:

1. Comment on or re-analyze work previously published in *JECT* or some other journal.
2. Raising a topic of general interest either to the perfusion community or to the membership of our sponsoring society, AmSECT.
3. Used for brief reports of research findings within our Journal's scope and those that are of interest to the perfusion community. This third form may be most useful in this COVID era of fast-moving developments, as a way to disseminate limited data. It could also be used to introduce compelling innovative concepts or propose new studies and research directions as well.

Book Reviews

Book reviews are performed on a regular basis of recent publications that are seminal to the field of cardiovascular perfusion and/or cardiovascular surgery.

LANGUAGE SERVICES

Text in the manuscript should be standard American English. Authors whose primary language is not English should consider having the manuscript reviewed by someone fluent in English and English grammar. Such a review will greatly improve the processing and acceptance of your manuscript by conforming to correct scientific English and

eliminating possible grammatical or spelling errors. *JECT* does not provide grammatical editing services and will return manuscripts that do not meet the minimum language requirements for additional editing prior to acceptance into the manuscript review process.

JECT does not provide a language service to authors, but there are a number of services that provide editing of manuscripts for author's whose primary language is not English.

Non-Native English author resources include:

<https://www.evelynben.com/>

www.grammarly.com

<http://www.manuscript-proofreading.com/>

<http://wileyeditingservices.com/en/>

<http://www.ease.org.uk/publications/ease-toolkit-authors>

<https://www.oleng.com.au/>

CHECKLIST FOR AUTHORS

The following checklist is provided for the author's convenience. Please use this list to ensure that the manuscript is complete when submitted. Incomplete manuscripts will not be processed and will be sent back to the author with a letter indicating the missing checklist items.

1. All authors on a submitted manuscript must sign a copyright permission form. The completed form must be submitted with the manuscript.
2. All authors must disclose any commercial association that might pose a conflict of interest. The disclosure is achieved by signing and submitting the conflict of interest form with the manuscript. Only authors with a conflict of interest are required to sign the conflict of interest form. If there are no conflicts of interests, indicate NONE on the form.
3. Manuscript must be in Microsoft Word format.
4. The manuscript must be double-spaced (including the title page, abstract, text, references, tables and legends). Do not right justify the manuscript. This also applies to correspondence. The manuscript must not contain any author information.
5. Number the pages in footer (right justify) consecutively, beginning with the title page as page 1 and ending with the legend page.
6. All figures should be saved in JPG or TIF format, while tables can be in word-processor format.
 - a. If you choose to print your figures, images, or tables in color you will be charged per image (\$50.00 per color figure).
7. Arrange the manuscript as follows:
 - a. **Two** Title pages:
 - i. With authors names
 - ii. Without authors names
 - b. Abstract
 - c. Text
 - d. References

- e. Tables
 - f. Figures
 - g. Legends
 - h. Number the pages in footer (right justify) consecutively, beginning with the title page as page 1 and ending with the legend page
 - i. Visual Abstract
8. Note that no author names can appear in the manuscript.
 9. *JECT* style complies with ISI Press Medical Style and Format, Edward J. Huth, ISI Press, 3301 Market St., Philadelphia, PA 19104.
 10. The Editor and Managing Editor use e-mail exclusively for communication regarding the manuscript review, revision, and acceptance process. The Publisher uses email to send e-proofs prior to final publication.
 11. Any questions concerning these instructions should be directed to the Managing Editor – Phone: 312-321-5156, E-mail: *JECT*@amsect.org

TITLE PAGE

1. Give the paper as short a title as possible.
2. Provide **two** title pages
 - a. With author information: Include only the names of the authors directly affiliated with the work. Include the highest academic credential of each author. Include the name and location of facility where the work was completed.
 - b. Without author information or affiliation. Since reviews are blinded, there cannot be any author information on this title page.
3. Keywords:
 - a. Include a list of four or five appropriate key words.
 - b. Common Keywords: www.editorialmanager.com/ject/journal/account/keyword.pdf
4. If the paper was presented at a meeting, provide the name, location, and dates of the meeting.

ABSTRACTS

The abstract should be no longer than 300 words, and should state concisely the objectives of the paper. Abstracts should contain subheadings as follows: Background, Methods, Results, and Conclusion. Abstracts for Case Reports and Techniques and Applications articles should be shorter (200 words or less). Abstracts must accompany every contribution, except for Letters to the Editor and book reviews.

TEXT

1. The text should be organized as follows: Introduction, Materials and Methods, Results, Discussion, References.
2. Cite all references, figures, and tables in numerical order in the text. Citations should be on the line (nonsuperscript) and enclosed in parentheses. For example: The cited reference is at the end of the sentence (1).

3. Spell out on first mention of each term, even if they are commonly used, and put the abbreviation in parentheses after the first usage. Use the abbreviation for subsequent mentions. Example: Thromboelastograph (TEG).
4. Give all hematologic and clinical chemistry measurements in the International System of Units (SI). Refer to ISI Press Medical Style and Format, Edward J. Huth, ISI Press, 3301 Market St., Philadelphia, PA 19104. In general, measurements of length, height, weight and volume should be reported in metric units (i.e. meter, kilogram, liter) or their decimal multiples. Temperatures should be given in degrees Centigrade (°C). Blood pressures should be given in millimeters of mercury (mmHg).
5. Identify all equipment and related materials by providing model number and device manufacturer, and include city, state and country of the company. Example: Hemochron Response (International Technidyne, Nevsky, NJ, USA). Cite all materials on the line immediately following first listing.
6. Type acknowledgments, including complete grant or subsidy information, at the end of the text before the references.
7. Copyright laws require the obtainment of letters of permission from authors and/or publishers for the use of quotations and illustrations that originally appeared elsewhere. Similarly, written permission is required for the use of patients identifiable in photographs. It is not sufficient to cover the eyes of patients to mask identity. Papers will be returned to authors unless copies of necessary permission letters are included with the manuscript.
8. Statistical analysis should be included at the end of the Materials and Methods section. A description of the statistical tests should be included in paragraph form, clearly stating the types of tests performed. Data should be presented as Mean \pm standard deviation and statistical significance accepted at a value equal to, or less than, 0.05. It is strongly recommended that a statistician review the methodology and be included as an author on the manuscript. If not, the statistician should be acknowledged at the end of the manuscript.

REFERENCES

1. The Index Medicus format is used for references.(see examples below)
2. Identify references in the text using Arabic numerals in parentheses on the line.
3. Do not cite personal communications, manuscripts in preparation, and other unpublished data in the reference list. Such information may be mentioned in the text in parentheses.
4. Type references double-spaced beginning on a separate sheet. Continue numbering pagination with body of manuscript. Number the references consecutively in the order in which they are mentioned in the text.

- Journal references should provide inclusive page numbers; book references should cite specific page numbers.
- Double-check references for accuracy, completeness, and duplication. It is the author's responsibility to provide accurate and complete references.
- Abbreviations of journals should conform to those used in Index Medicus. The style and punctuation of the references should follow the formats outlined below:

JOURNAL ARTICLE

- Diehl JT, Eichorn EJ, Konstam MA, et al. Efficacy of retrograde coronary sinus cardioplegia in patients undergoing myocardial revascularization: A prospective randomized trial. *Ann Thorac Surg.* 2000;45:595–602. (List all authors if 6 or fewer; otherwise, list first 3 and add “et al”).

WEB REFERENCES

- AmSECT. Standards and Clinical Practice Guidelines. 2018. Available at: <http://www.amsect.org/page/standards-and-guidelines-1117>. Accessed April 17, 2020.
- Wright BD. The Rasch Model for Test Construction and Person Measurement. 1978. Available at: <https://www.rasch.org/rasch.htm>. Accessed May 11, 2020.

IN PRESS REFERENCES

- Stevens RE, Millman RG, Johnson, AJ. Increase in interleukin-8 levels during hypothermic repair for giant cerebral aneurysms. *J Extra Corpor Technol.* (in press). Do not cite unless a publisher has formerly accepted the manuscript.

CHAPTER IN BOOK

- Smith PL. The neurological sequelae of cardiopulmonary bypass. In: Kay P, ed. *Techniques in Extracorporeal Circulation.* Oxford, UK: Bitterworth-Heinemann; 1993:183–93.

BOOK

- Guyton A, Rees TAL, Mahy BWJ. *A Dictionary of Virology.* Oxford, UK: Blackwell; 1981:230.

FIGURES AND TABLES

- Use high quality resolution for all figures and tables. Handwritten lettering is not accepted.
- One figure per page.
- Submit all figures as JPG files.
- Using black and white for all fill quantities of bar graphs enhances publication quality. Do not use gray shading for filling figure boxes. Multiple shades of gray do not reproduce well and should be avoided. All charts (bar graphs and pie charts) should be in two dimensional perspective. (See Example: Table 1)
- The use of color in figures represents a significant increase in publication costs. If color figures are included, a \$50.00 charge per color figure will be assessed to the primary author if the manuscript is accepted for publication.

- Figures and tables should be self-explanatory, and data should not be duplicated in the text or illustrations. If the figure or table provides redundant information, it will be deleted
- Tables should be typed double-spaced on separate sheets, each with a number (Arabic) and title above table. One table per sheet. (see Example below)
- Explanatory notes and legends are to be included as a list on a Legends page (see below) immediately following the last table or figure. Provide a key to each figure or table identifying all abbreviations in alphabetical order. The key should be placed below any explanatory notes.
- Authors must include written permission from the publisher to reproduce any previously published (print or digital media) figure(s), table(s), or legends.
- Figures and tables may be reduced in size by the publisher to suit space requirements.

Example:

Example:

Table 1. Coagulation assessment during ECMO for congenital heart disease.

Event	PT (seconds)	aPTT (seconds)	Fibrinogen (mg dL-1)
Pre-LHB	46.9	96	156
Day 1	19.2	100	221
Day 2	15.4	100	221
Day 3	16.0	56	112
Day 4	15.9	89	194
Preoperative	15.2	44	189
Postoperative	19	52	132

LEGENDS

Legends are the descriptions of figures, tables or other graphics. These should not be placed on the submitted figures, but should be typed double-spaced, and included on a separate sheet. Numbers should be Arabic and correspond to the order in which the illustrations occur in the text. Identify (in alphabetic order) all abbreviations appearing in the illustrations at the end of each legend. Example: CP - Centrifugal Pump; PP - Pneumatic Pump; RP - Roller Pump.

Example legends:

Table 1. Coagulation assessment during the first 10 days of life. AT III, Antithrombin III; FSP, Fibrin Split Products; Hct., Hematocrit.

Table 2. Thromboelastographic assessment during ATIII concentrate infusion. K Time, Kinetic time denoting rate of clot growth; R Time, Reaction Time for initial clot development; Mas. Amp., Maximum Amplitude.

Figure 1. Pre-AT-III concentrate infusion profile with an AT-III activity.

Figure 2. Platelet count and fibrinogen concentration during neo-natal ECMO.

FIB, Fibrinogen concentration; PLT Ct., Platelet Count.

HUMAN INVESTIGATION

Include the date of Institutional Review Board or human research committee approval, or the ethical guidelines that were followed by the investigators in the Materials and Methods section of the manuscript.

HUMANE ANIMAL CARE

The Materials and Methods section of the manuscript must contain a statement assuring that all animals used in the study received humane care in compliance with the “Guide for the Care and Use of Laboratory Animals,” published by the National Institutes of Health (NIH Publication No. 85-23, revised 1985).

MANUSCRIPT PROCESSING

Once a manuscript is received, it will be assigned a unique number. An email will be sent to the submitting author stating the receipt of the manuscript, and noting any deficient documentation. All communication concerning the manuscript is confidential between the submitting author and the Managing Editor or Editor. No communication with secondary authors, or outside individuals, will occur without written permission from the submitting author.

REVIEW PROCESS

Two or more reviewers will be assigned to evaluate all articles. Acceptance for publication is based on the articles significance to the perfusion community and its scientific validity. Editorial revisions may be required for clarity. Authors are encouraged to adhere to these guidelines and to proofread the manuscript to expedite processing.

Papers submitted by authors who do not have English as a first language pose a significant slowing of the review process and a higher rejection rate. Authors are encouraged to have their manuscripts reviewed by colleagues well versed in the English language. Failure to do so may result in excessive delays and possible rejection. Papers not accepted for publication are not returned to the submitting author. However, all original artwork, illustrations, figures and tables will be returned if requested.

Once a manuscript is accepted, a final version will be submitted digitally along with one printed copy. It is the author’s responsibility to assure that the copy sent to the publisher is the final version.

VISUAL ABSTRACT FILE TYPE

Upon submitting your manuscript, authors will also be asked to submit a visual abstract file when submitting original and technique articles. The visual abstract should be a summary of the take home message of the article using a combination of text and icons. Visual abstracts should be submitted as a separate file in Editorial Manager.

A primer on creating visual abstracts is available for review by authors at the following link: https://static1.squarespace.com/static/535bcb2fe4b05fe61b320c51/t/586fe712bebafb8c864f28f0/1483728662763/VisualAbstract_PrimerV1.pdf.

The essentials of generating a visual abstract are as follows:

1. Review how other authors have produced visual abstracts. One resource is “#visualabstract” on Twitter located at: <https://twitter.com/search?q=%23visualabstract&src=typd>
2. Create a draft of the visual abstract that includes the study population, methods used and key finding of your study using the visual abstract template available on the *JECT* Editorial Manager site.
3. Simplicity and clarity are keys to creating a visual abstract. Successful visual abstracts leverage icons to connote meaning, rather than using text. With this in mind, the author(s) should select three icons to relevant to his/ her study. There are a number of image/icon banks on the internet, some are free to use, others require payment.
 - a. Sites with free icons: (also search “icons free download”)
 - i. <https://www.iconfinder.com/search/?q5download>
 - ii. <https://all-free-download.com/free-icon/>
 - iii. <http://glypho.eu/free-icons>
 - b. Pay for use icons:
 - i. <https://thenounproject.com/>
 - ii. <https://www.iconfinder.com/search/?q5download>
 - c. Copyright Issues. It is the author’s responsibility to ensure that that chosen icons are not copyrighted. To avoid this problem, either use the copyright filter during an image/ icon search or subscribe to an icon image bank.
4. The reviewers assigned to review your manuscript will also provide feedback on the visual abstract, if one has been submitted. Authors will be able to submit changes to their visual abstract during the manuscript revision stage.
5. If the manuscript is accepted for publication, *JECT* will prepare the visual abstract for dissemination via AmSECT social media platforms. The final draft of the visual abstract will be reviewed by the AmSECT Marketing and Creative Services department prior dissemination.
